

NEW METROPOLITAN PERSPECTIVES 2022

FOCUS SESSIONS - FS

FS-RH01

SCENARIOS OF TERRITORIES BETWEEN CITIES AND VILLAGES FOR THE ECOLOGICAL TRANSITION

Keywords: Scenarios; Landscapes; Villages.

The ecological transition must be a passage from the model of the industrial city, i.e. economies of scale and agglomeration, towards more socially and environmentally balanced forms of anthropization. It must be an approach that embodies integrated planning strategies between rural areas and small, medium, large and metropolitan urban areas, as requested by the 2007 Leipzig Charter.

This with the aim of building inclusive and sustainable communities for inhabitants and nature: that is the objectives of Smart City (2010), using the flows of Energy and Communications, taken up by the New Green Deal of 2019 and by the EU turning point of 2020 based on the Green Transformation and Digitization.

Then a session that intends to propose possible and desirable scenarios of territories and cities, villages highlighting the great opportunity to decrease the pressure on the large, few, existing centers and revive those that over the centuries have drawn the landscape but are in crisis and disappearing.

CHAIRS

Sandro Fabbro - Polytechnic Department of Engineering and Architecture (DPIA), University of Udine
Graduated in Urban Planning at the University Institute of Architecture in Venice, PhD (1993), currently is associate professor. Scientific director of international and national research projects, he has almost 200 registered research products.

Francesca Silvia Rota - CNR IRCrES

Researcher at CNR IRCrES. She holds a Ph.D. in Territorial Planning and Local Development. Her research interests include local development, competitiveness, sustainability and resilience.
